

A set appointment for tribologists in Europe: 23rd International Colloquium Tribology

Ostfildern, 2 November 2021 – For the 23rd time the Technische Akademie Esslingen (TAE) hosts the International Colloquium Tribology from 25 to 27 January 2022. The biannual conference takes place in Stuttgart/Ostfildern (Germany) and is one of Europe's largest conferences on tribology and lubrication. With participants from all around the world, the event is an international exchange forum for industry and academia.

Supported by the International Advisory Board, the Programme Planning Committee has assembled an intense three-day programme of 145 lectures from research, industry and practice in six parallel sessions, framed by inspiring plenary talks.

Spectrum of tribological topics in various disciplines

„We are proud that the conference covers the entire spectrum of current tribological topics in its various disciplines. The event focuses on new trends in lubricants and additives, test methodologies and measurement technologies, coating surfaces and underlying mechanisms and digitisation in tribology. Special sessions are dedicated to sustainable lubricants and the i-Tribomat initiative“, says Roland Schöll, Head of Tribology Department at TAE.

The event will be fully hybrid. Interested parties decide whether they like to attend in person or stream the lectures live on their device at a reduced price.

A parallel exhibition and the evening reception offer unique networking opportunities. A visit of the medieval town of Esslingen and a guided tour of Germany's oldest sparkling wine cellar complements the Colloquium.

Further information and registration at www.tae.de/go/tribology.

The Technische Akademie Esslingen (TAE) has been an international partner for companies and private individuals for more than 60 years for effective training and further education in the field of vocational qualification. Currently, more than 10,000 companies make use of TAE's wide range of educational programmes. Seminars, certificate courses, conferences and digital courses are part of the range of services, as are part-time study courses and medical-technical training at the MTAE branch (Medizinisch Technische Akademie Esslingen).
